

CHASE WHEELER

cwheeler0204@gmail.com | (714) 728-3719 | github.com/Sneaky1000 | Website: www.chasew.dev

Skills

Languages: Golang, JavaScript, TypeScript, Python, HTML, CSS/SCSS, PHP
Technologies: Vue.js, Node.js, FastAPI, Flask, SQL, MongoDB, Linux, Digital Ocean, Git, Docker, GCP, AWS

Professional Experience

PPC Meta

Temecula, CA

Full Stack Developer - Internship

Jul 2021 - Dec 2022

My first internship working with professional collaborators & building a suite of tools to help ad agencies automate the management of pay-per-click advertising campaigns.

- Integrated Vue.js components with Apollo GraphQL to deliver dynamic, data-driven web app interfaces.
- Worked with Firebase Firestore to manipulate & store data pertaining to consumers of the service.
- Implemented a team system with roles & privileges, allowing management of multiple campaigns at once.

TurnKey Marketing

Corona, CA (Remote)

Full Stack Software Developer - Full Time

Dec 2022 - Aug 2025

My first full-time role as a professional software engineer at 19 years old, developing full-stack applications to automate workflows for internal departments & building responsive websites for major enterprises.

- Built full-stack applications from the ground up to automate internal processes such as email advertisement.
 - This new level of accessibility drove a near 200% growth in the advertisement system's efficiency.
- Hastily learned new languages & technologies to integrate myself into the agile development process.
- Completely re-created/re-vamped older internal software to be more efficient, sustainable, & steadfast.
- Recognized & swiftly promoted in less than a year based on the quality of my work & rapid learning aptitude.

Senior Software Engineer - Full Time

Aug 2025 - Present

- Provided structured onboarding, technical training, and ongoing guidance to junior and mid-level developers.
- Contributed to architectural decisions and technical strategies to support long-term scalability and growth.
- Partner with cross-functional teams to gather requirements and translate them into technical solutions.
- Acted as a point of escalation for technical challenges, modeling effective problem-solving approaches.

Personal Projects

AUTONOMOUS CAR A self-driving car simulation using neural networks & genetic algorithms in JS.

DISTRIBUTED SERVICE A distributed service utilizing gRPC built with Golang & deployed via Kubernetes.

Education

Great Oak High School · International Baccalaureate Full Diploma

Aug 2018 - Jul 2021

Courses: IB Computer Science, IB Mathematics, Calculus 1-3, CodeAcademy Python & Vue courses

- 4.83 & 4.91 GPA Junior & Senior year respectively
- Was involved in a robotics club & developed functional robots utilizing Arduino
- Wrote multiple research reports on the intricacies of elliptic curve cryptography & genetic algorithms
 - Developed a functional genetic algorithm that encrypts text using a symmetric key with MATLAB
